

Ohio Voter Survey Results: Most reject the notion that parent vanity is precluding students from enrolling in high school career education

OVERALL RESULTS

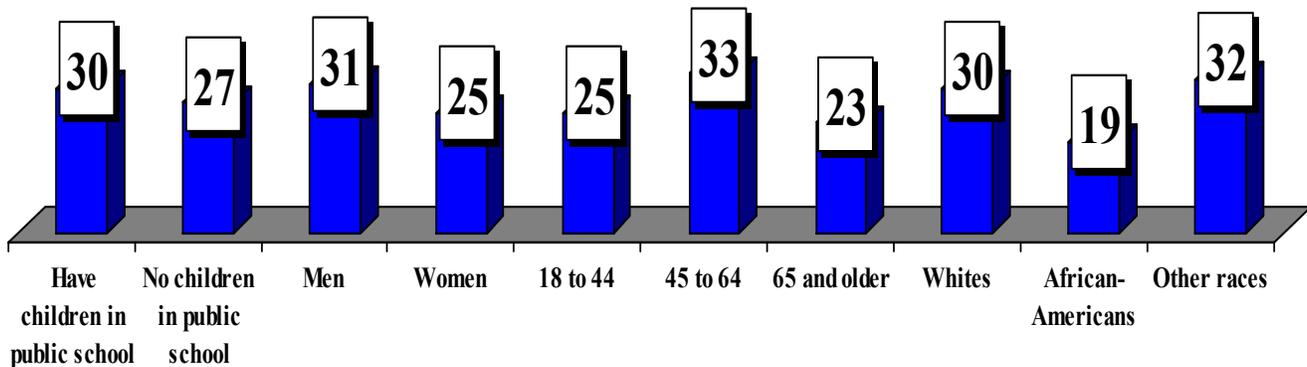

QUESTION WORDING:

“Do you agree or disagree the reason there are not more students allowed to enroll in career and technical schools during their final two years of high school is because their parents worry that it will reflect poorly on themselves?”

The notion that parent vanity may be influencing whether or not students enroll in career and technical education programs for their last 2 years of high school seems to be roundly rejected by a broad spectrum of the public, including, most notably, people with children enrolled in public schools (parents, largely). That said, the fact that over one-quarter agreed suggests that it is nevertheless an impediment for schools trying to enroll more students and the students themselves, who in some cases may be thwarted by parents that fear vicarious repercussions.

RESULTS AMONG SELECT KEY SUB-GROUPS

METHODS: This survey research data was gathered through telephone interviews that specially-trained interviewers Conducted with 801 randomly-selected Ohio voters with histories of voting in recent even-year November general elections or were recent new registrants, using a combination of valid residential, VOIP and cellular telephone listings. The interviews were performed during the period of January 16, 2018 through January 19, 2018. The overall estimated margin of sampling error is +/- 3.46%, based on a confidence level of 95%, although it varies for each individual question. This means that if this survey were repeated, 95 times out of 100 the results would be within plus or minus 3.46% of those provided herein. Adjustments were made to weight the results toward demographic and geographic characteristics of the state's electorate, in order to account for under- and over-sampling that normally occurs as a result of the random selection process, and to ensure that all major sub-groups are represented in proportion to their actual percentages. Like all polls, this survey research is subject to other possible sources of error, such as unintentional bias in the wording of questions, data-entry error and nonresponse bias. Please note that this survey question was not funded or commissioned by any organization or committee. Permission is granted for distribution to share this information with any interested parties.
